

Merchant Testimony Video Script " Extended Edition

Sunrise Fine Jewells × OkCredit Hackathon

FORMAT: Sit-down interview. Interviewer off-camera. Store owner on-camera.

SETTING: Store counter. Jewellery display visible in background. Laptop with dashboard open nearby.

TEXT OVERLAY: "Rajesh Gowda, Owner " Sunrise Fine Jewells, Bengaluru"

TONE: Candid, natural, warm. Like speaking to a friend " not a TV ad.

FULL Q&A SCRIPT

BLOCK 1 " The Problem Before

Interviewer:

"Tell us a little about Sunrise Fine Jewells and your day-to-day before using this system."

Owner:

"We've been in this business for many years. We sell gold, silver jewellery " rings, necklaces, bracelets, all kinds. Every single day, the gold rate changes. Sometimes it changes twice a day. So every morning, I had to check the rate on my phone or from a broker, write it down, and then calculate each item's price manually with a calculator. If I missed updating, I could be quoting the wrong price to customers. That's a serious problem in a jewellery shop."

Interviewer:

"Was there a specific moment where you realized " 'okay, I need a better solution'?"

Owner:

"Yes! One day a customer came in, asked about a necklace. I quoted her a price. She went home, thought about it, came back the next day. The gold rate had changed overnight. My price was now different. She felt I was being dishonest, even though I wasn't. That really bothered me. The price should be accurate at all times, automatically. I shouldn't have to manually fix it every few hours."

BLOCK 2 " First Impressions of the App

Interviewer:

| "When you first saw this dashboard " what was your reaction?"

Owner:

| "My first reaction was " this looks like a bank's software, not a small shop system! Very clean, very professional. The colors are nice " it's not too bright, not too dark. The gold color theme suits a jewellery store perfectly. Even my staff said 'sir, this looks very premium.' It's not like those old systems with 100 buttons on one screen. Everything is simple, clear, easy to read."

Interviewer:

| "Was it difficult to learn how to use it?"

Owner:

| "Not at all. Within one day, my staff was using it on their own. The tabs are very clear " Inventory, Add Stock, Resale, Calculator, Sales Ledger. You click the tab and you know exactly what you'll find there. If even my older staff members can use it without asking me, that's a good system."

BLOCK 3 " Live Rates Feature

Interviewer:

| "Let's talk about the live gold and silver rates. How does that work for you?"

Owner:

| "This is honestly my favorite part. The moment I open the dashboard, I can see today's rate " 24K gold, 22K gold, 18K gold, silver " all right at the top. And these rates are coming from the market directly. They update automatically. I don't have to do anything. No phone, no broker, no calculator. The rate is there, the item's weight is there, and the app just... calculates everything. Subtotal, making charges, GST " all done in one second."

Interviewer:

| "And what if you want to offer a special rate to a customer? Can you do that?"

Owner:

| "Yes! There's an override option. If I want to fix the gold rate myself " say I've already agreed on a price with a bulk buyer " I can turn on manual override, type my rate, and all the valuations update instantly across all items. Then when I'm done, I turn it off and the live rate comes back. That flexibility is very useful in real business."

BLOCK 4 " Inventory Management

Interviewer:

| "Before this app, how were you keeping track of your stock?"

Owner:

| "Notebook and Excel. Seriously. We had a big register where we would write down every item " the weight, the category, the price. But the price we wrote was the price that day. If the gold rate went up the next week, that price was wrong, but there was no way to update it easily. With this system, every item's price recalculates automatically every time the rate changes. My inventory is always up to date, always accurate."

Interviewer:

| "You can see your entire inventory on one screen?"

Owner:

| "Yes " the Inventory tab shows every available item with its current value. I can see the name, category, purity, weight, the metal value today, making charges, GST, and the final price. If the gold rate goes up by 200 rupees per gram, I see all prices update immediately. No manual work. I can also search " if I want to find all 22K rings, I type it and it filters instantly. Or I can sort by highest value, lowest weight " very useful when a customer has a budget and I need to suggest the right item."

Interviewer:

| "What about seeing how much inventory you have in total " the overall value?"

Owner:

| "The overview dashboard shows me exactly that. Total gold weight in stock, total silver weight, total estimated value of everything I have right now. If I'm going to a bank or a lender, I can tell them exactly what my stock is worth at today's market rate. Before this, I had no idea without sitting down with a calculator for one hour."

BLOCK 5 " Barcode & Label System

Interviewer:

| "Tell us about the barcode system. How has that helped?"

Owner:

| "Every time we add a new item, the system automatically creates a unique barcode ID for it " like a fingerprint for that jewellery piece. We print a small label with the store name and barcode, and attach it to the item. Now when a customer brings that item to the counter, we just scan it. The full details come up immediately " weight, purity, today's price, everything. No searching, no guessing. Very fast."

Interviewer:

| "And the labels look good? Professional?"

Owner:

| "Yes, the label has our store name " Sunrise Fine Jewells " printed clearly. We can print it on small jewellery tags. It looks proper, not like a handwritten sticker. Customers see a professional label and they feel confident they're buying from a serious store."

BLOCK 6 " Billing, Checkout & Invoices

Interviewer:

| "Let's talk about the billing process. How does checkout work?"

Owner:

| "When a customer selects an item, I click 'Add to Cart.' I can add multiple items. The cart shows the total automatically " with all the charges, GST " everything broken down clearly. I enter the customer's name and phone number, click checkout, and in two seconds, the invoice is ready."

Interviewer:

| "And the invoice " what does it look like?"

Owner:

| "It's a proper tax invoice. Store name at the top, invoice number, date, customer name, each item listed with its purity, weight, and price, then subtotal, GST, grand total. Very clean. I can print it directly from the screen. Customers are very impressed when they receive a proper printed receipt. It feels like a branded store experience."

Interviewer:

| "Can you go back and look at old invoices?"

Owner:

| "Yes, this is something I really like. The Manager Sales Ledger tab shows every single transaction " date, customer name, phone number, total amount. I can filter by date, search by customer name, check any invoice from any day. Before, if a customer called asking about their purchase from last month, I had to dig through papers. Now I search their name, and the invoice appears in one second. Very convenient."

BLOCK 7 " Gold & Silver Resale / Exchange Module

Interviewer:

| "You mentioned customers bring old jewellery to exchange. How does the app handle that?"

Owner:

| "This was a very manual process before. Customer brings old gold, I weigh it, calculate its value, subtract that from the new item's price, and tell them the balance. Lots of chances for error or confusion. Now there's a dedicated Resale tab. I enter the old gold's weight, purity, rate, any deduction for wastage or melting loss. The app calculates the exact value of the old gold and shows me immediately " how much we owe the customer, or how much they need to pay extra. Everything is transparent."

Interviewer:

| "And for customers who are only selling their old gold " not buying anything new?"

Owner:

| "That also works! If a customer just wants to sell their old gold chain, I enter it in the Resale section, complete the transaction, and the app generates a Purchase Voucher " a separate receipt that shows we received the gold and paid that amount to the customer. This is very important for our own records and for the customer's peace of mind."

BLOCK 8 " Walk-in Calculator

Interviewer:

| "What about customers who just walk in to ask " 'how much will this ring cost?' before any purchase?"

Owner:

| "There's a Walk-in Calculator tab for exactly this. I enter the weight, purity, making charge " and it gives me the estimated price instantly. No item needs to be in the system. It's for quick quotes at the counter. Earlier I was doing this on a physical calculator and writing on paper. Now it's instant, and the rate is always the current market rate."

BLOCK 9 " Time Savings & Overall Impact

Interviewer:

"Realistically " how much time has this saved you every day?"

Owner:

"I would say at least one to two hours every day. Morning rate update " gone. Manual price calculations " gone. Searching through notebooks for old bills " gone. Now my staff can handle most of the billing themselves without calling me. I can focus on customers, on sourcing, on growing the business. That's the real value."

Interviewer:

"Has customer experience improved?"

Owner:

"Definitely. Customers get a quick, accurate price. No waiting. The invoice is neat and professional. When they come back for exchange, everything is documented, there's no dispute. One customer told me " 'sir, your store has become very tech-forward.' That made me happy. We're a family jewellery store, but now we work like a modern business."

BLOCK 10 " Closing Statement

Interviewer:

"What would you say to other jewellery store owners who are still doing this manually?"

Owner:

"I would say " try it for one week. Just one week. You'll see how much stress you remove from your daily work. Gold rates change every day. Stock keeps moving. Customers expect fast service and proper receipts. Managing all of this in a notebook is the old way. This system brings everything together " inventory, valuation, billing, resale, records " all in one place, always updated, always accurate. I would not go back to the old method."

(Direct to camera, confident)

"Sunrise Fine Jewells has been running for many years. And with this tool, we are ready for many more " and in a much better way."

DIRECTOR'S NOTES

Timestamp	Shot / Direction
Block 1	Medium shot. Owner is relaxed, slightly leaning forward.
Block 3	Cut to screen recording of live rates panel refreshing.

Block 4	B-roll of inventory table scrolling, filter being applied.
Block 5	Close-up of barcode label being printed, scanning animation.
Block 6	Screen recording of checkout process + invoice print modal.
Block 7	Screen recording of Resale tab " entering weight, purity, net payable calculating.
Block 9	Warm medium shot. Owner is smiling.
Block 10	Direct-to-camera. Confident posture.

SUGGESTED B-ROLL LIST

- Live gold rate updating on the dashboard (auto-refresh)
- Hovering over an inventory card and seeing the valuation breakdown
- Barcode label generating and being attached to a ring
- Webcam scanning a barcode tag on a necklace
- Cart drawer opening with multiple items added
- Invoice modal appearing after checkout
- Sales Ledger filtered by date showing a list of transactions
- Resale tab with old gold weight entered and net payable value calculated
- Walk-in calculator showing instant price as weight is changed
- Overview tab showing total inventory weight and value

PRODUCTION TIPS

- Shoot in the store with natural window light if possible. The warm gold theme of the app will complement the store's aesthetic.
- Have the actual dashboard open on a laptop in the background to make it feel real.
- Record the owner's answers in one flowing take per block " avoid making it feel too scripted.
- Kannada or English delivery both work well depending on target audience.
- Add subtitles if the final video will be shared online or with a mixed audience.
